

Superset Chart Archive

Bundled Helm archive for the upstream Superset service, enabling optional dashboarding and business-intelligence deployment.

Component

Prefect Server Chart Archive

Bundled Helm archive for the upstream Prefect Server service, enabling workflow orchestration.

Component

Prefect Worker Chart Archive

Bundled Helm archive for the upstream Prefect Worker service, enabling Kubernetes-based workflow execution.

Component

oauth2-proxy Chart Archive

Bundled Helm archive for oauth2-proxy instances that protect browser-facing services with OIDC authentication.

Component

Keycloak Chart Archive

Bundled Helm archive for the upstream Keycloak identity provider used when OIDC is included with the deployment.

Component

Spark Operator Chart Archive

Bundled Helm archive for the upstream Spark Operator, enabling Kubernetes-native management of Spark applications.

Component

MinIO Chart Archive

Bundled Helm archive for the upstream MinIO object store used when lakehouse data is stored inside the cluster.

Component

DataHub Chart Archive

Bundled Helm archive for optional DataHub metadata catalog and discovery services.

Component

DataHub Prerequisites Chart Archive

Bundled Helm archive for optional DataHub support services, including persistence, messaging, and search dependencies.

Component

Vault Chart Archive

Bundled Helm archive for optional Vault secret-management deployment included with the chart.

Component

JupyterHub Chart Archive

Bundled Helm archive for the upstream JupyterHub service, enabling authenticated multi-user notebook environments.

Component

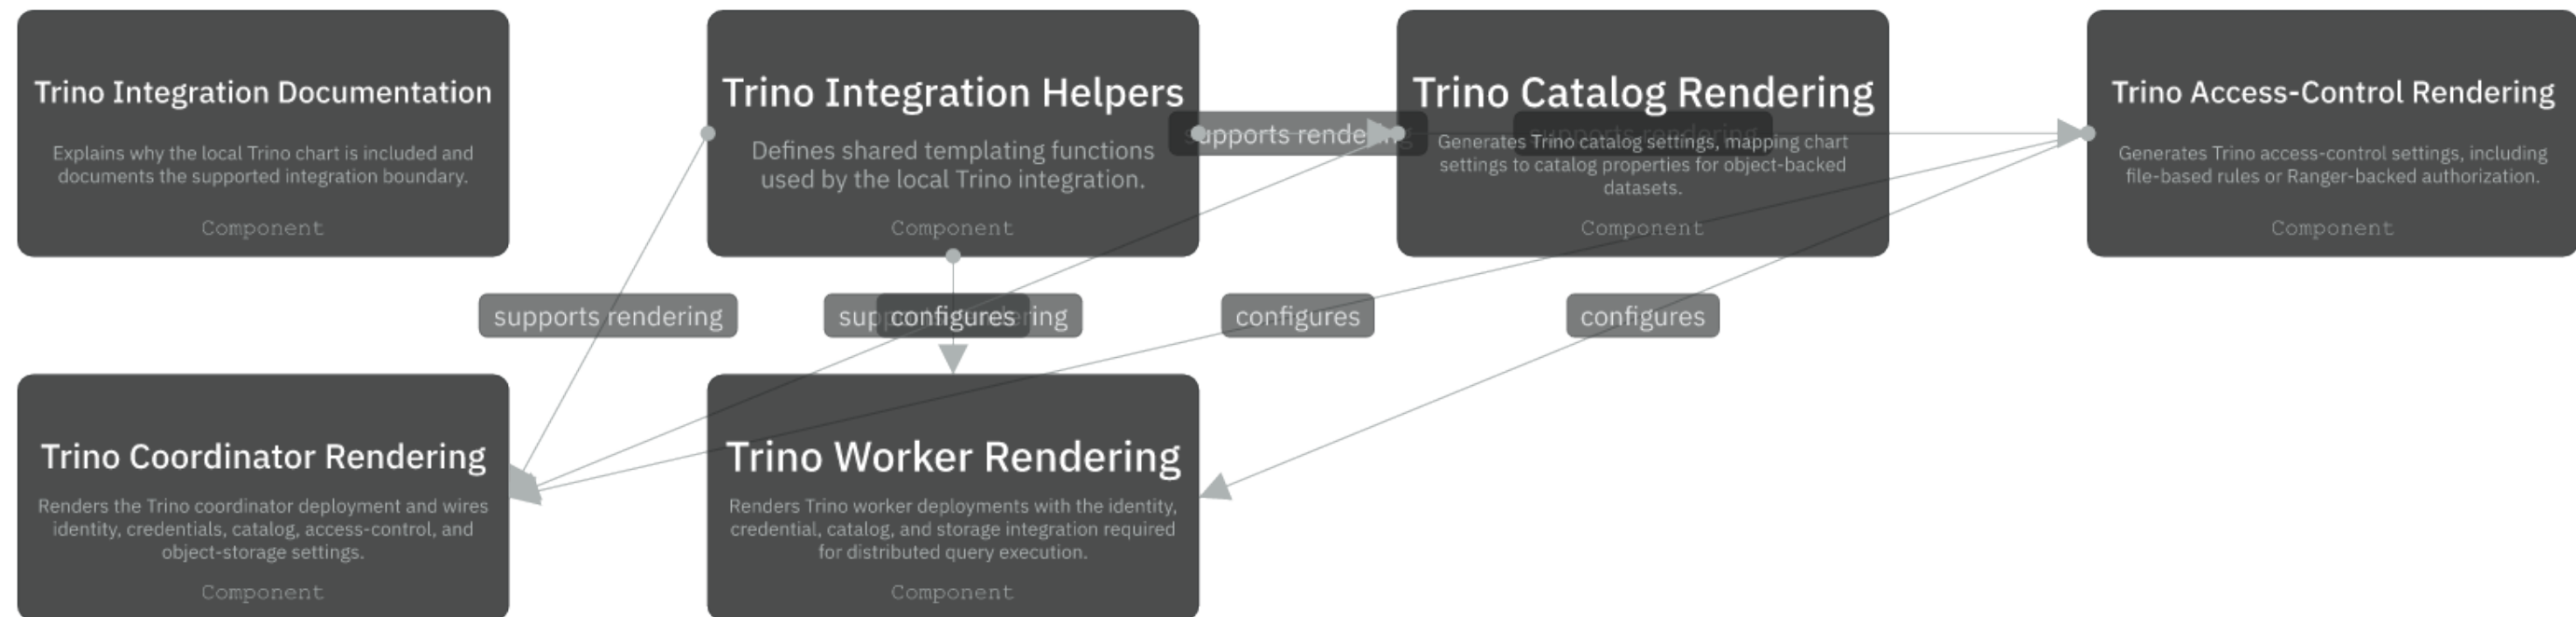

PostgreSQL Chart Archive

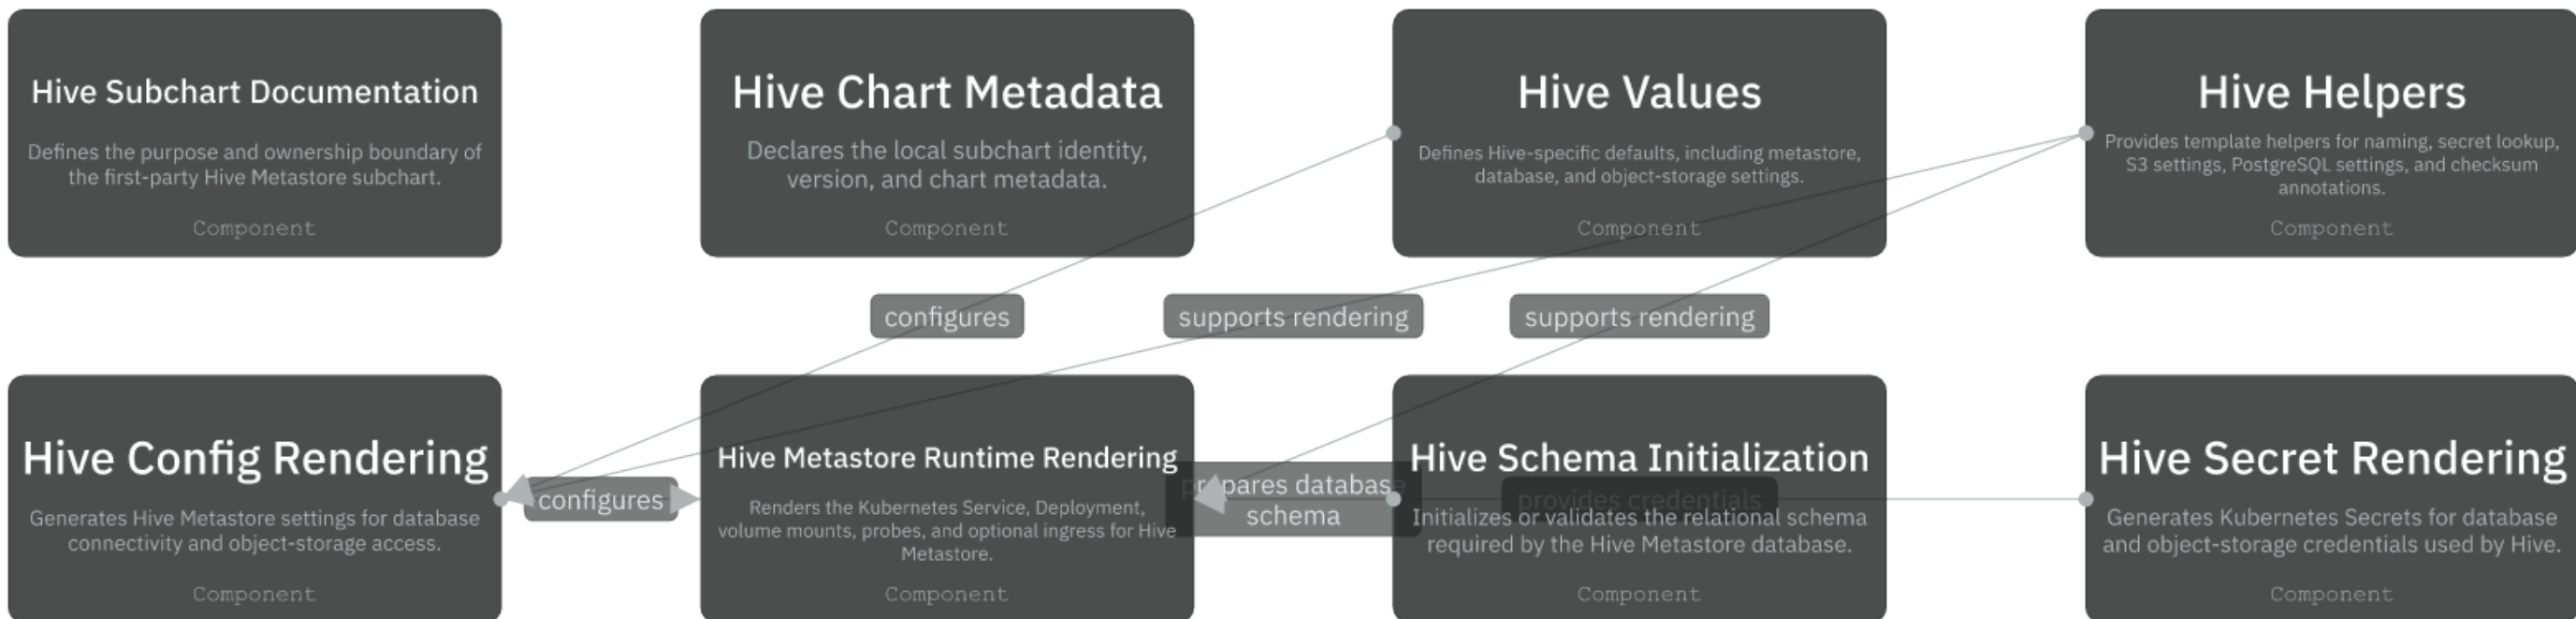

Bundled Helm archive for the upstream PostgreSQL chart reused by service-specific database components.

Component

Version-resolved Helm dependency archives bundled with the chart to make dependency resolution explicit and reproducible.

Store

First-party Helm subchart that renders the optional Hive Metastore service used for SQL catalog metadata.

Store

Dependency Refresh Check

Refreshes Helm dependency archives and updates lock metadata so packaged dependencies remain reproducible.

Component

prepares
dependencies for

Helm Lint Workflow

Runs automated checks for licensing, documentation, security, rendering rules, shell scripts, JSON schema, and Helm syntax.

Component

runs before

Example Render Checks

Renders every maintained example configuration file to verify that supported installation profiles produce valid manifests.

Component

provides rendered
manifests for

Render Contract Checks

Verifies expected render outputs and expected failure modes for the chart's documented configuration rules.

Component

must pass before

Smoke Install Workflow

Installs an identity- and governance-oriented local profile into a disposable cluster to test an integrated runtime path.

Component

Automated checks that lint, render, smoke-install, and test the package against documented configuration rules before publication.

App

Helm Package Step

Builds the versioned Helm chart archive for release.

Component

produces package
for

OCI Push Step

Publishes the release chart package to the GHCR OCI registry.

Component

records

Release Metadata Step

Records chart version, labels, annotations, and release metadata used by deployment repositories.

Component

Release automation that builds versioned Helm artifacts and publishes them for deployment repositories.

App
