

Primary source tree for the umbrella Helm chart; defines chart metadata, default configuration, templates, and dependencies.

Store

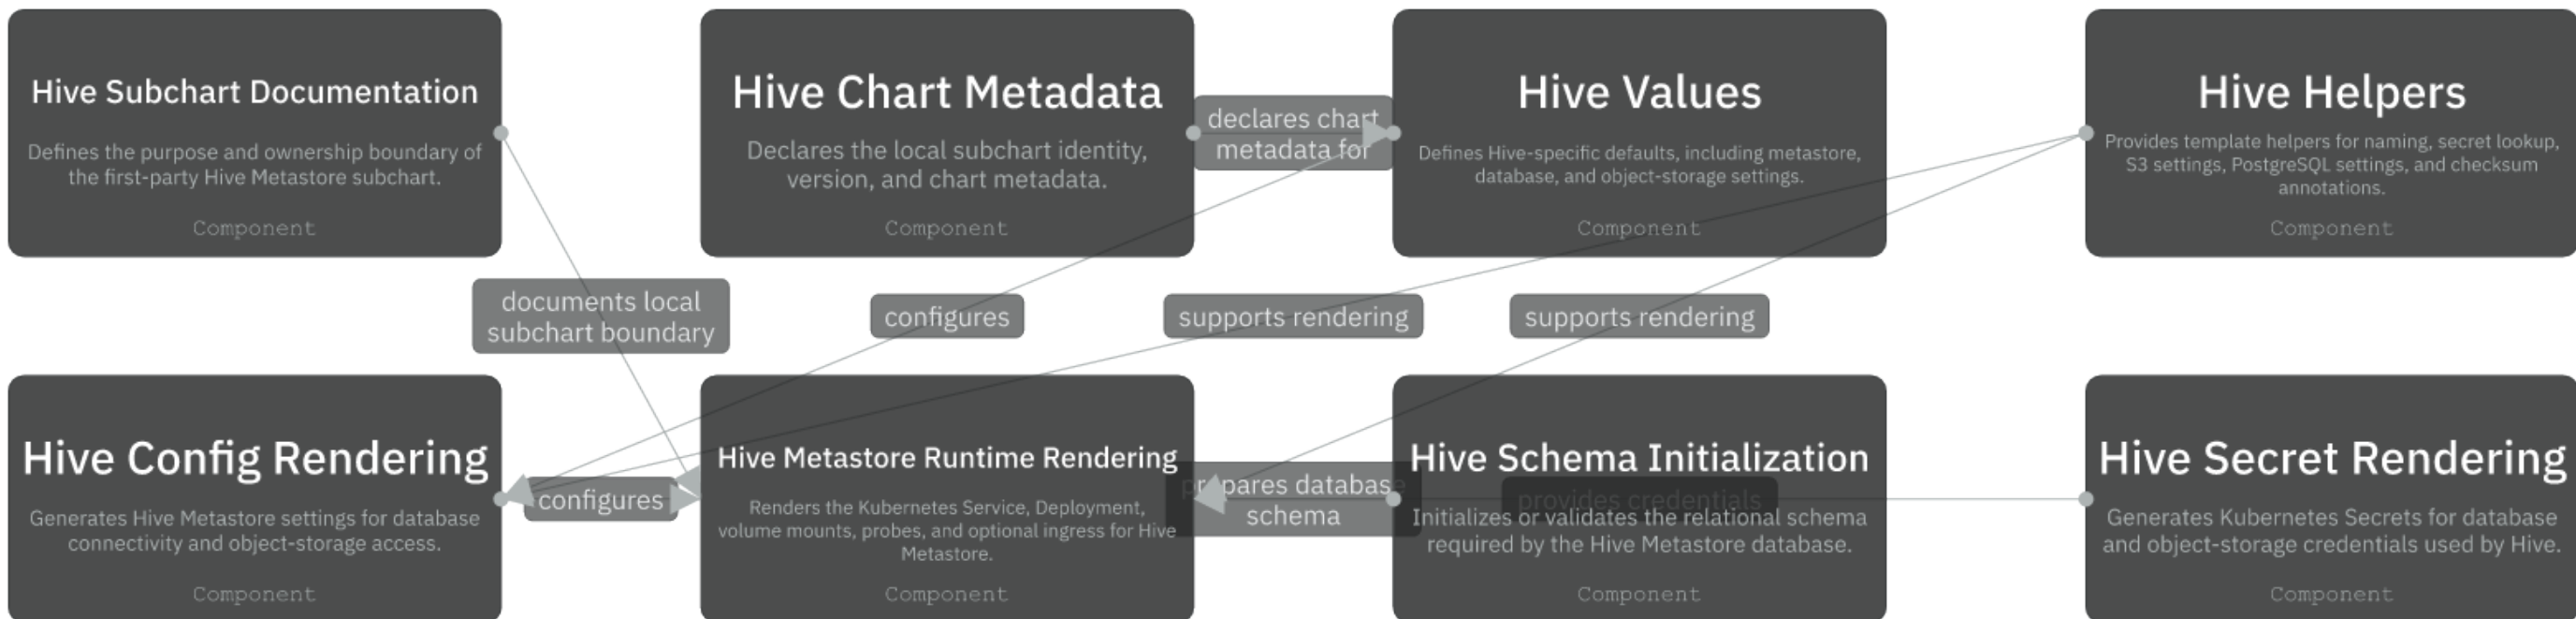

Version-resolved Helm dependency archives bundled with the chart to make dependency resolution explicit and reproducible.

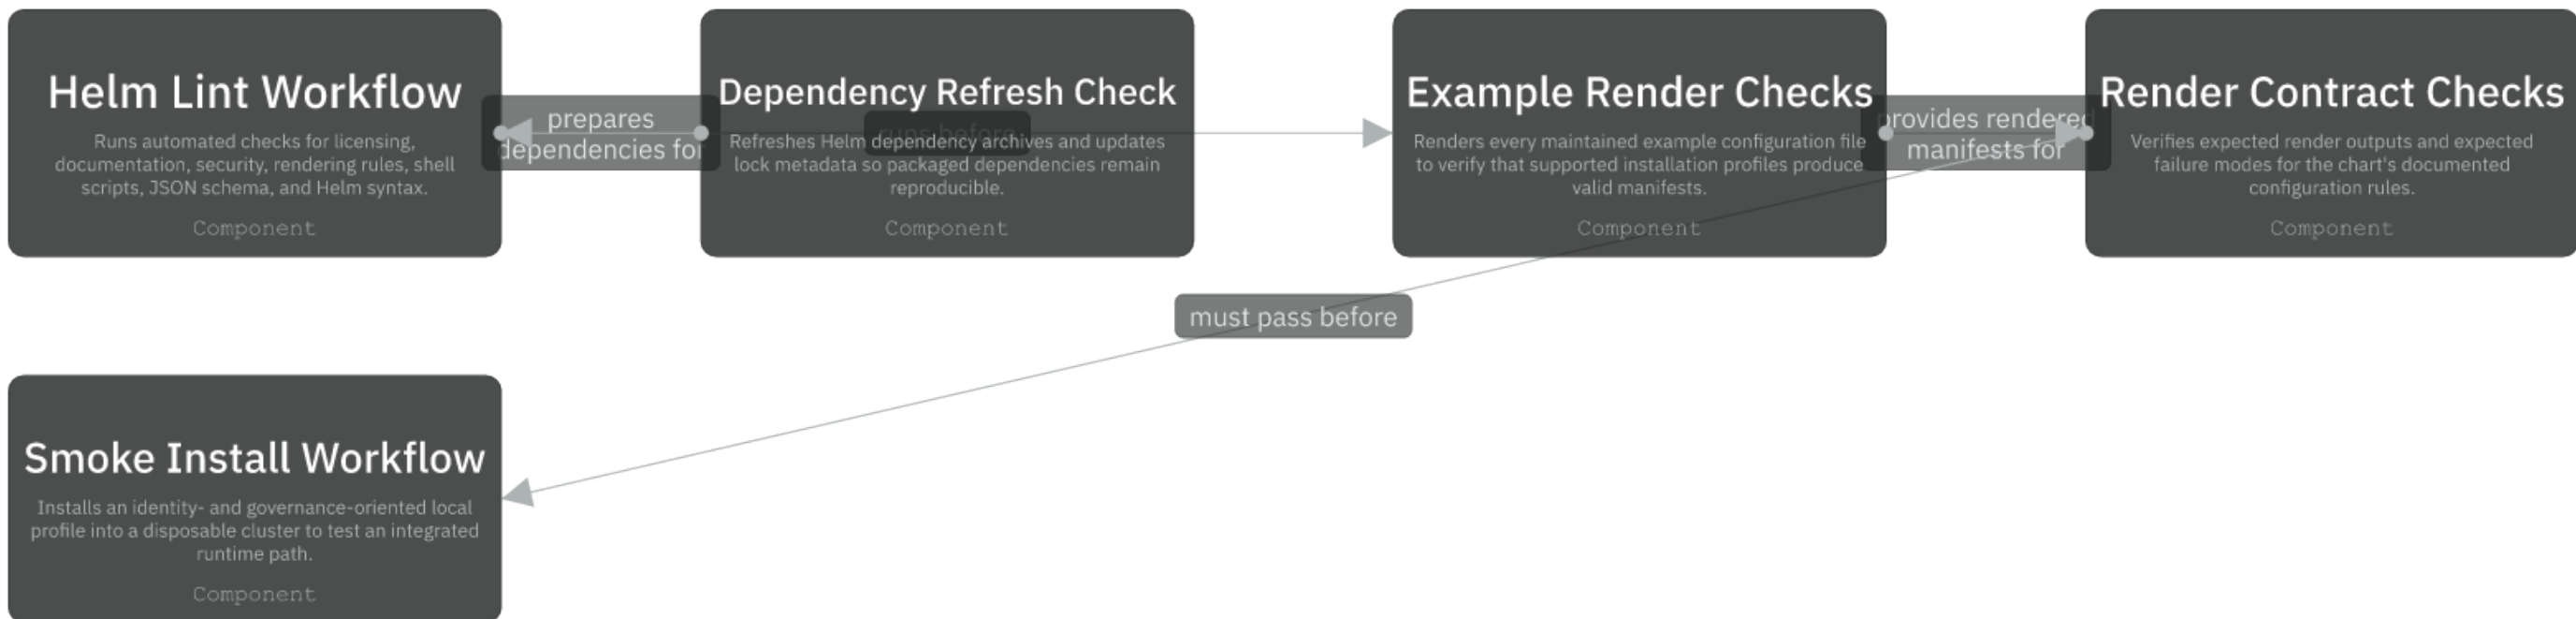

Local copy of the upstream Trino chart adapted for DLH-in-a-box identity, storage, and access-control integration.

Store

First-party Helm subchart that renders the optional Hive Metastore service used for SQL catalog metadata.

Store

Automated checks that lint, render, smoke-install, and test the package against documented configuration rules before publication.

Helm Package Step

Builds the versioned Helm chart archive for release.

Component

produces package
for

OCI Push Step

Publishes the release chart package to the GHCR OCI registry.

Component

records

Release Metadata Step

Records chart version, labels, annotations, and release metadata used by deployment repositories.

Component

Release automation that builds versioned Helm artifacts and publishes them for deployment repositories.
